Taking the histograms

Two everyday JVMs on a developer laptop, and what they hold.

```
jps -l                          # find the pids
jmap -histo <pid> | head -15    # IntelliJ IDEA
jmap -histo <pid> | head -15    # SonarQube for IDE
```

- Without `:live` the histogram also counts garbage not yet collected.
- Look for `Integer`, `HashMap$Node`, `Object[]` and `$$Lambda` near the top.

IntelliJ IDEA: what is on its heap

Top of `jmap -histo` against a running IntelliJ IDEA.

Screenshot to add

`jmap -histo <pid of IntelliJ IDEA>`
